

ATHUL KRISHNAN A S

SOFTWARE DEVELOPER

Thiruvananthapuram, Kerala, India, **Phone:** +91 8078114005

Email: athulkrishnanas321@gmail.com, **LinkedIn:** <https://www.linkedin.com/in/athulkrishnanas/>

Professional Summary

Results-driven Software Developer with 1 year 10 months of experience building scalable web, mobile, and enterprise applications using React.js, React Native, TypeScript, Spring Boot, and MongoDB. Strong expertise in REST API development, JWT authentication, microservice concepts, reusable architecture, and performance optimization. Proven track record of debugging complex production issues, improving system efficiency, and delivering secure, reliable, and maintainable applications.

Work Eligibility: Eligible for roles inside and outside India. Available for Full-Time Onsite/Remote positions.

Technical Skills

- **Languages:** JavaScript, TypeScript, Java, Python, C
- **Frontend:** React.js, React Native, Redux Toolkit, Tailwind CSS, SCSS, Responsive UI
- **Backend:** Spring Boot, REST APIs, JWT Authentication, MongoDB, Firebase
- **DevOps & Cloud:** AWS (CodeCommit), Docker (Basic), GitHub Actions
- **Tools:** Git, GitHub, Jira, Postman, Android Studio, VS Code, IntelliJ IDEA

Education

Diploma in Computer Engineering

Central Polytechnic College, Thiruvananthapuram, Kerala — 2021 to 2024,

Professional Experience

Software Developer

IIOTX Technologies Pvt Ltd, Thiruvananthapuram, Kerala — June 2024 to February 2026

- Built scalable web and mobile applications supporting over 500 active users.
- Developed 50+ reusable UI components that reduced development time by 30%.
- Enhanced frontend performance by 70% using lazy loading, code splitting, and memoization techniques.
- Resolved production issues related to BLE instability and FCM push notifications.
- Created REST APIs with Spring Boot and integrated JWT Authentication and MongoDB.
- Worked across Agile sprints with CI/CD workflows using GitHub Actions.
- **Tech Stack:** React.js, React Native, Redux Toolkit, TypeScript, Spring Boot, MongoDB, FCM, AWS

IT Technical Assistant

Vikram Sarabhai Space Centre (VSSC), Thiruvananthapuram — March 2026 to Present

Contract Basis via Sivavasu Electronics

- Monitoring and maintaining Data Centre operations ensuring uptime and system reliability.
- Performed OS installation, system configuration, and routine maintenance across multiple environments.
- Created and managed Virtual Machines (VMs) for internal applications and testing environments.
- Configured RAID setups to ensure data redundancy and system performance.
- Worked with Linux command-line tools for administration, troubleshooting, and automation.
- Developed frontend modules using React and contributed to backend development using Python Django.
- **Tech Stack:** Linux, VMware/VM Creation, RAID, React.js, Python, Django

Key Projects

OMS – Hospital Food Ordering & Management System

React.js, TypeScript, Redux Toolkit, Spring Boot, MongoDB

- Developed complete hospital food ordering and delivery ecosystem including dashboards, meal management, and POS ordering.
- Implemented refunds, cancellations, wallet management, settlements, room credits, and multi-role admin controls.
- Built admin configurations for restaurants, payment gateways, buildings, rooms, subscriptions, users, and notifications.

SERVICES – Food & Request Management Platform

React.js, React Native, TypeScript, Redux Toolkit

- Developed Food module supporting room ordering, takeaway ordering, order tracking, and pre-booking.
- Added multilingual support with dynamic language switching.
- Built Request module with support for location tagging, dynamic forms, and multimedia attachments.
- Enabled request history tracking with real-time updates and notifications.

GO – Workforce & Delivery Management App

React Native, Redux Toolkit, Firebase FCM

- Developed mobile app for delivery workers and transporters to manage food deliveries and service requests.
- Implemented task visibility, delivery completion, duty toggle, break requests, and push notifications.

KDS – Kitchen Display System

React.js, TypeScript

- Built real-time kitchen order tracking system for high-volume operations.
- Implemented order pipeline (Received → Preparing → Prepared).
- Optimized UI for rapid updates and improved kitchen efficiency.

TASKS – Enterprise Request & Task Automation System

React.js, Redux Toolkit, Spring Boot

- Built dashboards, request management, team management, and task tracking modules.
- Designed auto task creation logic triggered by request workflows.
- Implemented dynamic forms, priority management, and advanced automation rules.

OT – Operation Theatre Management System

React.js, TypeScript, Redux Toolkit, AWS

- Developed OT admin system including booking management, clearance tracking, and reporting modules.
- Implemented equipment scheduling, surgeon calendars, and roster management.
- Created real-time OT schedule visualization with equipment availability validation.

AI Chat Platform

React.js, TypeScript, Python, Django, vLLM, WebSockets, OpenWebUI

- Cloned and customized OpenWebUI to create an enhanced AI chat interface with user-friendly UI improvements.
- Integrated vLLM models for high-performance inference, enabling fast and scalable text generation.
- Built backend APIs using Django for session management, prompt handling, and authentication.
- Implemented real-time streaming responses using WebSockets with optimized token streaming.
- Added features such as conversation history, role-based access, and admin analytics dashboard.
